

CONSTRUCTION IS HERE!

You may see crews from AUI in your neighborhood! Conduits are being buried in a small incision, mostly within the greenbelt area in front of properties. You may also see small ground level chambers being installed.

Please read this leaflet for further information on construction of the FiberCity® project.

CONSTRUCTING WITH CARE

SIFI NETWORKS WILL BE RESPONSIBLE FOR MAINTAINING AND REPAIRING THE SIDEWALK JOINT, DRIVEWAYS AND GREENBELT DIRECTLY IMPACTED BY THE CONSTRUCTION OF SIFI NETWORKS FROM THE EDGE OF THE PUBLIC RIGHT OF WAY TO AND BETWEEN THE CURB, AND TO THE PRIVATE PROPERTY LINE.

TURN OVER
FOR OUR
FAQS

**INSTALLATION AREA ENCOMPASSES - SIDEWALK, GREENBELT, CURB OR ROADWAY
WE WILL RESTORE THE WORK AREA WHEN INSTALLATION IS COMPLETE**

In most cases we will conduct work in the public right of way's greenbelt area in front of properties. Using a dirt trench machine, a temporary trench will be created between the curb/edge of the pavement and edge of the public right of way. Crews will bore under the driveways to enable installation of the fiber conduit. The trench will be restored using soil and by dispersing grass seed and laying straw matting on top. Once restoration has been completed, residents are encouraged to water the area covered by the straw matting. The straw matting can be removed once the grass has grown to about 3-4 inches, which could take approximately 14 to 30 days or even up to 60 days. For a short period of time the grass may also appear different from other grass in the area.

We are confident residents will realize the long-term benefits of this privately funded, superfast fiber network in their community for generations to come.

FAQs

Who is Sifi Networks?

Sifi Networks is a developer who via it's FiberCity® brand privately funds, builds and operates citywide fiber optic networks enabling Service Providers to deliver next generation applications including superfast internet, video and phone.

What is a FiberCity®?

A Sifi Networks' FiberCity® is a fiber optic infrastructure that delivers gigabit internet speeds as well as providing the foundation ready to support the delivery of secure high availability services which a municipality can leverage for Smart City applications and initiatives.

Are Tax payer dollars paying for this?

No. This is a privately funded project with no tax payer's dollars used.

Who is the Internet Service Provider?

Sifi Networks is in the process of finding the best Internet Service Providers for the city. Our aim is to partner with Internet Service Providers who will offer excellent customer service levels, competitive prices and a wide selection of product offerings.

How is the project being built?

In most cases we will conduct work in the public right of way's greenbelt area in front of properties. Using a dirt trench machine, a temporary trench will be created between the curb/edge of the pavement and edge of the public right of way. Crews will bore under the driveways to enable installation of the fiber conduit. The trench will be restored using soil and by dispersing grass seed and laying straw matting on top.

How can I help the restoration process?

Once restoration has been completed, residents are encouraged to water the area covered by the straw matting. The straw matting can be removed once the grass has grown to about 3-4 inches, which could take approximately 14 to 30 days or even up to 60 days. For a short period of time the grass may also appear different from other grass in the area.

What is a chamber?

Chambers contain important equipment required for deployment of the network, and are located in the right-of-way greenbelt throughout the city. The ground level chambers are 3 feet by 2 feet in size.

How do I know when construction is going to happen in my street?

You will receive a door hanger as notice of construction. We kindly ask that you be aware of signs notifying of any parking restrictions that may apply, as well as any traffic control that is in place.

Are you building on my property?

No. We will be building in the public right-of-way, in most cases, near or at the edge of your property line.

How do tenants or HOA residents get connected?

You must speak to your HOA board, landlord or property manager as they will need to give us permission to access your property to connect you. Speak with your neighbors and create demand for your building! For further info please contact Travis Nelson at travis@sifinetworks.com

How can I sign up?

You can register your interest now at www.farmingtonareafibercity.com

When can I expect my property to be installed with fiber?

Fiber will become live across the city in phases. Please register your interest with us at farmingtonareafibercity.com and we will notify you of your internet service provider.
